TAU LOWLAND VEGETABLE PRODUCTION USING SUSTAINABLE AGRICULTURE

DEPARTMENT OF RESEARCH AND DEVELOPMENT

DEPARTMENT OF RESEARCH AND DEVELOPMENT

Description

The Department of Research and Development has initiated the establishment of TAU Lowland Vegetable Production, focusing on enhancing soil health through advanced biofertilizer technologies. This project incorporates innovative approaches like nano biofertilizers and thermophilic-based biofertilizers to boost nutrient availability and improve soil structure, leading to healthier, more productive vegetable crops. The initiative aims to promote resilient lowland agriculture through these sustainable practices while contributing to long-term soil vitality and ecosystem health.
