

Water Conservation Program Implementation

Locations of Small Water Reservoirs inside the university campus

University lagoon

Photo of small water reservoir near the TAU Agribusiness Center

Description:

The campus has ten (10) small water reservoirs (SWR) that collect and store about 57,000 cubic meters of rainwater during the rainy season and are used for plant irrigation during summer. The volume of water held by these reservoirs can sufficiently supply all the requirements of the university. Also, new building designs are now integrated with rainwater harvesting systems (pipes and storage tanks).
