Students and employees of Tarlac Agricultural University (TAU) are trading their classroom and office tasks for fieldwork as the College of Agriculture and Forestry (CAF) and the Business and Auxiliary Services (BAS) Office jointly organize Rice Planting Days, 16-18 September. This hands-on activity provides the participants with a unique opportunity to learn the traditional and modern techniques of rice cultivation firsthand and know more about the daily struggles of farmers.

TAU has integrated the UN Sustainable Development Goals into its teaching, research, and extension initiatives. Climate action, sustainable agriculture, gender equality, and poverty reduction are among the SDG-related themes addressed in courses and research projects at the Colleges of Agriculture and Forestry, Education, Business and Management, Engineering and Technology, Arts and Sciences, and Veterinary Medicine.

The TAU SDG Congress 2024, organized by the College of Arts and Sciences, brought together students from all colleges to explore sustainability, global citizenship, and innovation for inclusive development. This event exemplifies TAU's comprehensive commitment to integrating the SDGs into students' learning experiences across disciplines.

TAU's Regional GCED Hub in Central Luzon promotes global citizenship and sustainability education to students and faculty, ensuring that each learner knows their responsibility in reaching the SDGs. Student programs link classroom learning with real-world impact through service-learning, agricultural innovation, and community development projects that address local and global SDG challenges. summarize
